

**Volunteer with us to help expand our mission of “protecting and improving the health of Brewster’s ponds through science, education and advocacy.”**

**Join the Citizen Science team!** The [BPC Citizen Science team](#) is composed of individuals of all ages and walks of life who are assigned a pond where they gather water samples bi-weekly from May through October. You’ll have fun learning about our ponds and working with your team. Most importantly, you will be serving the community with important news about the health of Brewster’s ponds.

**Assist with our Brewster elementary schools Pond Education Program.** The [Pond Education Team](#) provides 2nd and 5th grade teachers with grade appropriate pond kits which include detailed curriculum guides, lesson plans, classroom activities, games, crafts and reference materials, culminating in end of year field trips to a Brewster pond. As a volunteer, you would assist with planning and attending four field trips for the students.

**Help the BPC plan events!** The [Events Team](#) plans, coordinates and oversees all of the BPC events that serve to educate the Brewster community and beyond for the protection and improvement of our ponds. Activities include securing event locations, planning the programs, overseeing set-up and break-down, and arranging for BPC volunteers to help as needed. Put those great organizational skills to work with us!

**Put your editorial skills to work with the Communications team!** The [BPC Communications Team](#) works to create all the organization’s newsletters and publications, manage the website, and publicize events and programs. If you have skills in writing, editing, and proofreading, this is the team for you! Our work is ongoing throughout the year and busier during the spring to fall months when most of the events occur.

**Work with your neighbors!** The [BPC Pond and Neighborhood Outreach](#) program works with neighborhood pond organizations on remediation and protection projects in efforts to solve solutions to problems that are affecting the specific pond. Volunteers communicate with pond representatives, visit ponds to diagnose problems and solutions, and manage remediation projects.
